

Unlocking the Potential: Exploring the Advantages of Onsite Energy in Driving the Energy Transition

Tuesday, March 26, 2024
10:00 AM – 11:00 AM CDT

Join the Southcentral Onsite Energy Technical Assistance Partnership (TAP) and INNIO Jenbacher for an interactive discussion on how onsite energy generation and storage at the point of consumption can enable facilities to improve resilience, operate with more flexibility, and reduce operating costs. This webinar will showcase how onsite energy technologies can support the energy transition, without adding pressure to the existing power grid infrastructure through different case studies.

LEARN FROM AN EXPERT

- Learn about different Onsite Energy technologies.
- Learn about the benefits of combining different Onsite Energy technologies fueled by natural gas, renewable natural gas, and hydrogen.
- Recognize how Onsite Energy can support fast charging stations.

Who should attend?

- End Users
- Energy Professionals
- Utilities and Energy Providers
- Facility and Energy Managers
- Project developers
- Architects and engineers
- Municipalities
